

Homework Style Guide

Each assignment will award a small percentage of points based on adherence to this style guide. When submitting an assignment, please be sure of the following:

- The top of the first page of your submission should include your name and the name of the assignment.
- All answers must be typed (no handwritten work).
- Each problem (NOT individual problem parts) should start on a new page in the order they were assigned. Note that individual problems ARE allowed to span multiple pages.
- Individual problem parts should be clearly designated on a line with no other text.
- Each figure should be labeled with a caption and each figure should be referenced in the text. This means that unnecessary figures should not be included in your final submission.
- Figures should be referenced in the order they appear (i.e. Figure 2 should not be mentioned in the text before Figure 1 is mentioned etc.).
- Code for all homework problems should be included in appendix and separated by problem (not necessarily problem part). As in the main body of the assignment, code for each problem should begin on a new page.
- All assignments should be submitted in pdf format. Microsoft word should provide a very straightforward way to convert your documents to pdf format. LaTeX and Rmarkdown will also create pdf documents directly.
